CAREER OBJECTIVE

- Results-driven Full-Stack Developer with hands-on experience in architecting and delivering high-performance Web and Cross-Platform Mobile applications.
- Strong foundation in backend API design with Laravel, asynchronous queue processing, and relational database optimization with MySQL, PostgreSQL, and Redis.
- Proficient in modern frontend engineering across React, Angular, Ionic, and Vue.js, committed to crafting responsive, scalable, and user-centric interfaces.
- Seeking a Full-Stack Developer position to leverage expertise in end-to-end system development, solve complex architectural challenges, and contribute effectively to high-impact engineering teams.

SKILLS

TECHNICAL SKILLS

- **Backend:** PHP, Laravel, RESTful APIs, Queues and Jobs, Eloquent ORM, Authentication and Authorization
- **Database and Cache:** MySQL, PostgreSQL, Redis
- **Frontend:** ReactJS, Angular, Ionic, Vue.js, TypeScript, JavaScript, Tailwind CSS, Bootstrap, Blade, HTML5, CSS3
- **Tools and Platforms:** Git, GitHub, Linux Server, Nginx, Postman, API Integration
- **AI-Assisted Development:** Claude, GitHub Copilot, Prompt Engineering, AI APIs

WORK EXPERIENCE

Full-Stack Developer | 09/2025 - Present

TINOTECH

- Architected and developed scalable full-stack web and mobile applications across multiple production systems using Laravel, React, and Angular Ionic.
- Designed and implemented secure RESTful APIs, asynchronous queue workers, and real-time WebSocket communication pipelines.
- Engineered normalized database schemas, complex indexing strategies, and caching layers with MySQL, PostgreSQL, and Redis to maximize system throughput and data integrity.
- Built high-performance, mobile-optimized user interfaces and cross-platform modules using React, Angular, TypeScript, and Tailwind CSS.
- Integrated automated payment gateways, third-party webhook event handlers, and device hardware APIs while deploying and maintaining services on Linux and Nginx environments.

PROJECTS

EcoLuck - Multi-Store Commerce, Omnichannel F&B & Reward Platform - Professional Experience | 4/2026 - Present

Role: Full-Stack Developer

Description: A multi-store commerce ecosystem combining an omnichannel online-to-offline F&B solution with a social crowdfunding reward platform, deployed on Zalo Mini App and Web Admin portals.

Key Features & Responsibilities:

- **Goal-Funded Crowdfunding and Reward Room Engine:** Architected a ticket escrow mechanism, capacity quota reservation, and complex State Machine workflows for room creation, member approval, automated refunds upon expiration, and instant reward distribution upon reaching 100% target.

- **Omnichannel F&B Closed-Loop System:** Developed QR table ordering, a real-time Kitchen Display System, and automated raw material inventory deduction based on dish recipes and bill of materials using Database Transactions and Pessimistic Locking.
- **Dispute Escrow and Store Balance Locking:** Built an automated balance freezing mechanism on merchant wallets upon customer complaint submission, safeguarding refund pools and executing automated financial settlements upon dispute resolution.
- **Double Immutable Ledger Architecture:** Engineered Money and Reward Ticket wallet management adhering to Append-Only Ledger principles, eliminating unauthorized balance tampering and enabling automated transaction reconciliation.
- **Zalo Mini App Client Optimization:** Utilized TanStack Query and Jotai for multi-tier state management, integrating native hardware APIs such as Camera QR scanner and Native Zalo Authentication, achieving a Time-to-Interactive under 1.5s in constrained WebView environments.

Tech Stack: Backend: PHP, Laravel 10, MySQL, Redis. Frontend: React 18, TypeScript, ZMP SDK, Tailwind CSS, WebSockets via Pusher and Laravel Reverb.

JobGogo - Enterprise ATS & On-Demand Gig Economy Platform - Professional Experience | 10/2025 - 4/2026

Role: Full-Stack Developer

Description: A dual-model recruitment platform combining an Enterprise Applicant Tracking System with a Geo-Spatial On-Demand Gig Economy network, delivering responsive Web and Native Mobile Apps for iOS and Android.

Key Features & Responsibilities:

- **Geo-Spatial On-Demand Gig Matching:** Integrated VietMap GL, Leaflet, and Turf.js to compute real-time GPS radius boundaries, marker clustering, and instant job discovery for candidates based on dynamic coordinates.
- **Real-Time Communication and Media Streaming Engine:** Implemented secure real-time messaging using WebSockets via Laravel Echo and Pusher, supporting full message lifecycles including message recall, reactions, forwarding, delete-for-me, secure media attachments, contact tagging, and mutual user blocking.
- **Automated Payment and Instant Reconciliation:** Integrated dynamic VietQR payload generation with SePay Webhook and VNPay IPN callbacks to automatically activate employer subscriptions and enforce package-based posting limits without manual intervention.
- **Enterprise ATS and 9-Module CV Builder:** Designed a multi-branch recruitment pipeline spanning candidate intake, interview scheduling, and evaluations; built a 9-module CV builder paired with an automated profile completeness scoring algorithm.
- **Cross-Platform Native Mobile Deployment for iOS and Android:** Developed using Angular 20, Ionic 8, and Capacitor 8, integrating native hardware capabilities including FCM Push Notifications, Camera, Haptics, and Geolocation alongside RxJS reactive state streams to ensure smooth 60fps performance.

Tech Stack: Backend: PHP, Laravel 10, MySQL, Pusher. Frontend: Angular 20, Ionic 8, Capacitor 8, TypeScript, VietMap GL, Leaflet, Tailwind CSS.
